

## Carriage Roller

Carriage Roller - Carriage rollers are specifically designed bearings which are utilized on lift masts so as to help them operate in tough environmental surroundings. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences like dust, cold, heat, moisture, contamination and aggressive ambient air. Therefore, the lift masts' guidance arrangements have to be particularly tough and have a particular high load carrying capability.

Carriage rollers have been created as the solution for operating in different environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts must be cost-effective and maintain operational security while having the ability to handle a specifically high load carrying capacity.
