The U.S. lift Truck division located in Cleveland has a skilled team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial domestic forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled lift trucks as part of a national machinery expansion project. Early sales of this manufacturing equipment focused on large business groups, the armed forces and on state-run firms. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Home-based forklift trade for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's superior technological advancements combined with sales success placed them in a situation of significant expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling industry. This project drastically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a new plant which helped set up the business for the fabrication of high end added-value goods suited for export. In 1993, the company had a global sales network and started exporting models they had developed through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas markets.
